DEAN IRIS GARDENS, MONETA, CALIFORNIA.

READ BEFORE ORDERING

The prices quoted herein cancel all previous quotations made either by letter or in printed lists.

Prices include delivery anywhere in the United States, on orders for not less than \$1.00 in value, provided such orders are placed in the summer or fall, when the stock is in the best condition for shipping. After the rains come they have made heavy root growth, the rhizomes are filled with moisture and consequently being softer, cannot be shipped as cheaply. Orders sent later than Dec. 1st, from outside the first three zones, will be sent by Express at the purchaser's expense.

Six plants will be furnished at dozen rates where they are quoted by the dozen. Price per hundred, or in larger quantities, quoted on application.

Terms: Cash with order. Remittance can be made by Post-office or Express Money Order, or by Bank Draft, payable to The Dean Iris Gardens.

A few suggestions in regard to the planting and care of Iris. They prefer a heavy soil and should not be planted deep, particularly the rhizomatus varieties. They require good drainage, and the Pogoniris or Bearded do not require as much moisture as most of the Apogon or Beardless. A location where they receive the morning or afternoon sun is preferable in Southern California. Under wide spreading trees is an ideal location for many varieties.

Important Notice. We exercise due care to keep all varieties TRUE TO NAME, and hold ourselves in readiness at any time to replace, on proper proof, any stock that may prove otherwise; but it is mutually agreed between the purchaser and ourselves that we shall not at any time be liable for any amount greater than the original price of the stock. All sales made subject to stock being unsold when order is received, or loss by any and all unavoidable causes.

POGONIRIS SECTION BEARDED IRISES

As our Bearded Irises, and most of the Beardless, bloom early, they begin to form new roots in July, so that better results can be obtained by early planting. Do not wait until Spring to plant your Iris and then expect them to bloom in a few weeks. Summer or early Fall is the best planting time.

To our Eastern customers we would say, this is the only time to plant most of our stock, as it is too far advanced by the time conditions suitable for planting in the colder climates where spring planting is done in March and April, and even May. Our Iris season is long. Some of the Bearded Irises bloom in March and most of them in April, the height of the blooming season being the latter part of April or first of May, depending upon the season. In some locations, particularly in the foot-hills, they are some two weeks earlier.

The letter "S" represents the three upright petals or standards, and "F" the three lower petals or falls in the following listed varieties.

Dark evergreen grassy foliage, with branching flowering stems 3 feet tall. Blooms intermittently throughout the year in Southern California. Each 35c; dozen, \$3.50.

BULBOUS, ONCOCYCLUS AND REGELIA SECTIONS

We are obliged to withdraw all Irises included under these Sections this year. This includes the Spanish Irises in the Xiphium Group, and Susiana in the Oncocylus Group, the most popular in these sections. We have not had sufficient encouragement to carry heavy stock in any of these species or varieties, and some are entirely depleted, as owing to the war we have not been able to replenish some of them. As the recent embargo placed on importing Irises goes into effect June 1st, we cannot do so this year, so we kindly ask that you do not order any of the species or varieties included in these Sections, as we cannot make any exceptions.
